G4 Data Loggers

G4 Icons

No limits have been exceeded

One or more limits have been exceeded

Logger is ready to be started

Logger is counting down the start delay

Loop overwrite mode on

Loop overwrite mode off

The logger has stopped

Battery capacity

External sensor

Internal sensor

The lower limit has been exceeded

The upper limit has been exceeded

The current display is informational

The current display shows the minimum value

The current display show the maximum Value

The current display shows the mean value

A marker has been applied

The value displayed is a relative humidity in percent

The value displayed is a temperature in degrees

The value displayed is a temperature in degrees Fahrenheit
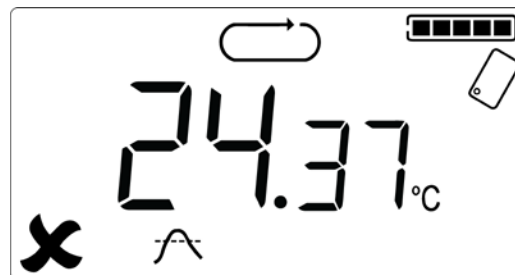

Start

Start Delay

When product integrity counts…
Manufacturers of laboratory calibrated temperature and humidity data loggers, real-time monitoring and cold chain solutions

Home

Home screen no limit has been exceeded

Home screen Upper limit exceeded

Note that the "current" temperature showing is the last sample taken. E.g., if sampling frequency is 10 minutes, "current" temperature could have been taken any time up to 10 minutes ago.

Current Temperature

Note that the "current" temperature showing is the last sample taken. E.g., if sampling frequency is 10 minutes, "current" temperature could have been taken any time up to 10 minutes ago

Time outside Limits

Lower Limit

In this example time shown is minutes & seconds
